What is Xtend™ technology and what does it do for patients?

New Xtend technology is a revolution in progressive lens design.

PATIENT BENEFIT = Extends the area of sharp vision within arm’s reach, so patients no longer have to move their heads to find “just the right spot.”

Xtend technology allows the wearer to see multiple distances through any point in the near and intermediate zones of the lens - the area within arm’s reach.

Varilux® X Series™ lenses are the result of:
• 5 years of research and development
• 19 wearer studies among thousands of wearers
• 15 new pending patents

Xtend technology is available with the following lens designs:
• Varilux® X 4D
• Varilux® X Fit
• Varilux® X Design
How does Xtend™ technology extend vision within arm’s reach?

Xtend technology allows Essilor lens designers the ability to control an infinite number of points on the lens according to the patient’s prescription.

As a result, patients can focus on multiple distances within arm’s reach through the same area of the lens. This provides sharp vision without the patient moving their head.

**Patient Benefits**

- Extends the area of sharp vision within arm’s reach
- Reduces head movement
- No more hunting for “just the right spot”

- **7 OUT OF 10**
- **PREFERRED OVER**
- **Varilux® S Series™**
